GSN FOUNDATION

Applied AI
Practitioner Program

- Build Real AI Projects
- Work with Startups
- Earn Certification

Presented by

GSN FOUNDATION

Program Summary

Overview

A 4-month live program guided by mentors that transforms professionals from AI learners to practitioners.

The program is offered by **GSN Foundation**, enabling hands-on innovation exposure and real-world AI problem-solving.

By the end, you'll:

- Build end-to-end AI products and co-pilots.
- Apply automation and agentic reasoning to solve challenges.
- Deploy AI systems with monitoring and explainability.
- Earn a GSN Foundation certificate and a startup experience credential.

Who is this program for?

Tech Professionals

1-10+ years

Build AI-powered apps, copilots, and automation flows.

Non-Tech Professionals

1-10+ years

Apply AI to content, workflows, and decision-making.

Leaders & Entrepreneurs

5-10+ years

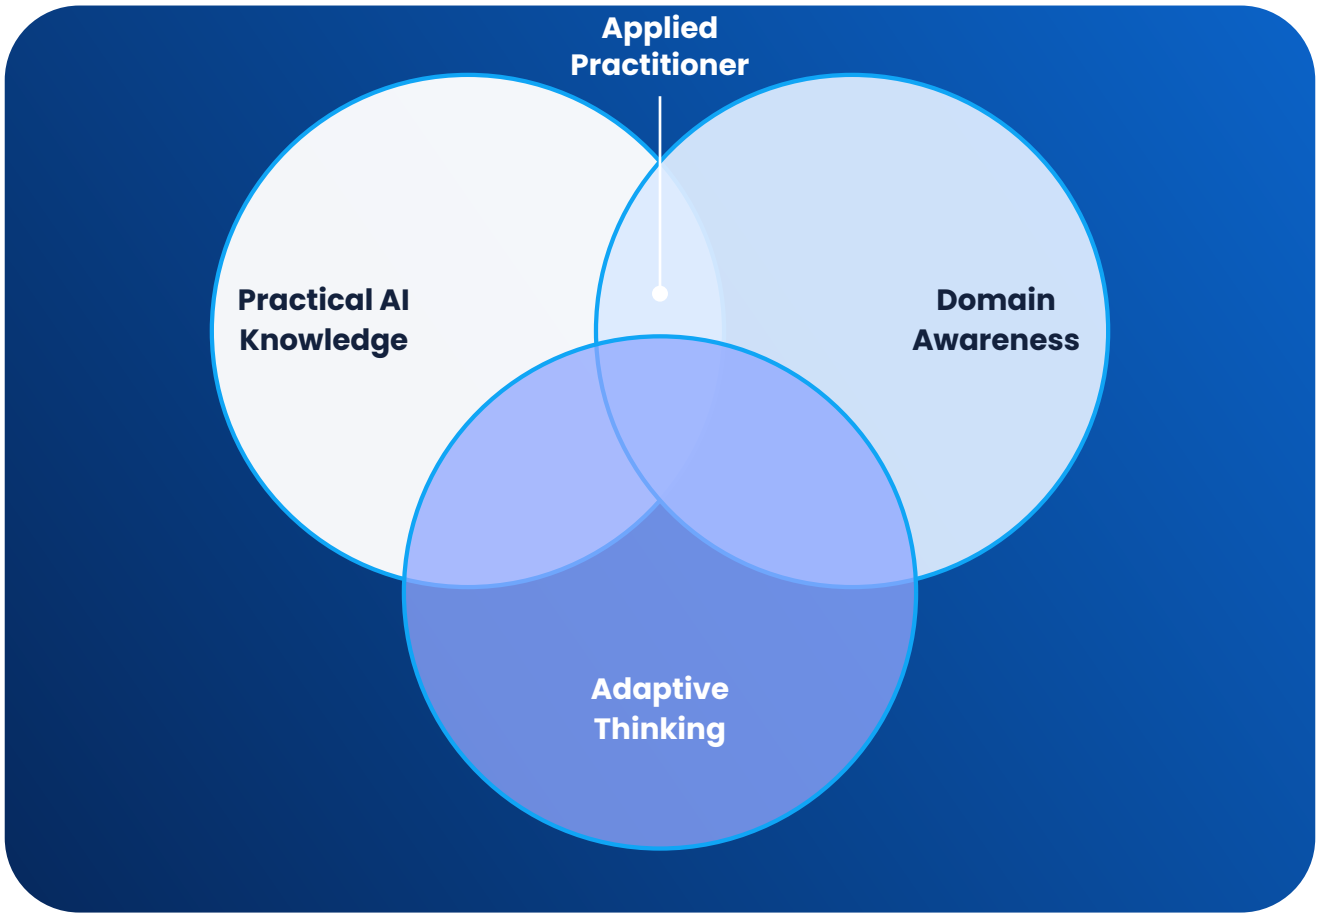

Strategize, manage, and implement AI-driven transformations.

GSN FOUNDATION

From AI learner to AI practitioner.

Learn | Build | Launch

AI Practitioner

Practical AI Knowledge

A **4-month live**, mentor-led journey that transforms you from **AI learners to AI practitioners.**

Domain Awareness

Applying AI to specific business challenges, whether in **marketing, HR, healthcare, or operations.**

Adaptive Thinking

Combining curiosity, experimentation, and agility to use **AI for new and evolving goals.**

How AI Practitioner Helps

Professionals Across Every Domain

1 Sales & Marketing Professionals

Transform repetitive tasks into intelligent, automated workflows.

Challenges Today

- Manual campaign creation
- Slow content production
- Limited personalization
- Delayed insights from customer data

How AI Practitioner Helps

- Build AI-powered campaign generators
- Automate lead scoring, follow-ups, and CRM updates
- Create brand-aligned visuals, scripts, and videos using multimodal AI

2 BFSI (Banking, Finance & Insurance)

Bring intelligence, accuracy, and speed to financial operations.

Challenges Today

- Manual report creation
- High compliance workload
- Repetitive financial analysis
- Non-personalized customer service

How AI Practitioner Helps

- Automate financial forecasting & budgeting assistants
- Build risk-analysis copilots powered by LLMs
- Deploy automated compliance checks using RAG on policy documents

3 Healthcare & Life Sciences Professionals

Use AI to improve care delivery, documentation, and operational efficiency.

Challenges Today

- Overwhelming documentation
- Slow administrative workflows
- High operational load
- Information scattered across systems

How AI Practitioner Helps

- Create clinical summarizers for patient records
- Build AI assistants for triage & FAQs
- Streamline workflow automations across hospital systems

4 Manufacturing & Supply Chain

Turn operations into predictable, optimized, and automated systems.

Challenges Today

- Manual demand forecasting
- Slow document and order processing
- Lack of real-time visibility
- High dependency on ERP operators

How AI Practitioner Helps

- Build forecasting assistants using Power BI, LLMs
- Automate procurement workflows and vendor communication
- Create document-intake bots for invoices, orders & SOPs

5 Software Development Professionals

Enable engineering teams to build faster, debug smarter, and ship AI-powered features.

Challenges Today

- Time-consuming debugging and documentation
- Repetitive coding tasks
- Fragmented product requirements
- Slow idea-to-prototype cycles

How AI Practitioner Helps

- Build AI debugging assistants for quicker troubleshooting
- Auto-generate documentation, test cases, and API specs
- Create rapid prototypes using no-code + LLM tools

6 Product Management Professionals

Turn ideas into AI-driven products with faster research, planning, execution, and customer insights.

Challenges Today

- Slow market research & competitive analysis
- Manual user feedback synthesis
- Difficulty prioritizing product features

How AI Practitioner Helps

- Automate research using LLM-powered insight generators
- Build interactive prototypes and demo apps without coding
- Auto-summarize user interviews & feedback into actionable themes

Program Certification

Certification from GSN Foundation

GSN Foundation recognizes your hands-on innovation exposure and real-world AI problem-solving with a certificate of successful program completion.

Your Project Portfolio

Every term ends with a portfolio-ready build, capped by a startup capstone.

- AI Knowledge Assistant
- AI Content Studio
- AI Workflow Co-Pilot
- AI Assistant Web App
- AIOps Dashboard
- Startup Capstone

AI Startup Certificate

Why it matters:

This is your practical experience credential: proof that you can use AI in the real world to solve actual problems.

Program Syllabus

Term 1 – Week 1-3

Foundations of AI Reasoning & LLM Workflows

Gemini | Pinecone | LangChain | LlamaIndex | Hugging Face Hub | Llama 3 | Notion AI | Claude

You'll Learn:

- How modern AI models **process**, **predict**, and **reason**.
- **Prompt engineering** for task control (role-based, few-shot, chain-of-thought).
- **Tokenization**, embeddings, and contextual memory for intelligent responses.
- **Retrieval-Augmented Generation (RAG):** connecting private data to LLMs.
- **Ethics**, safety, and bias mitigation in AI responses.
- **Evaluating AI outputs** using qualitative and quantitative metrics.

Project: **AI Knowledge Assistant**: Build an intelligent chatbot that retrieves and summarizes information from custom documents.

Outcome: **Confidently build and tune LLM**-based assistants and foundation-model workflows using natural language.

Program Syllabus

Term 2 – Week 4-5

Generative & Multimodal AI for Real-World Content

Runway | DALL-E | Ideogram | Kaiber | Pika Labs | Synthesia | ElevenLabs | Leonardo.Ai

You'll Learn:

- **Text-to-image**, **text-to-video**, and **text-to-audio** generation.
- Understanding **diffusion** and **multimodal** creativity.
- Building content workflows: **ideation > generation > feedback > iteration.**
- Using **AI for brand assets**, marketing visuals, and learning design.
- **Applying AI ethics in synthetic media** and responsible creation.

Project: **AI Content Studio**: Build an AI system that produces marketing visuals, ad scripts, or video explainers aligned with brand guidelines.

Outcome: **Create consistent, high-quality multimedia content using GenAI tools, without coding.**

Program Syllabus

Term 3 – Week 6-7

Agentic AI & Intelligent Automation

Zapier | Make | n8n | Agent AI | Vapi | Slack | Notion

You'll Learn:

- Fundamentals of **autonomous agents** and multi-agent reasoning.
- **Task decomposition** and tool calling for business workflows.
- **Connecting CRMs**, spreadsheets, and communication platforms.
- Using "**Vibe Coding**" to describe logic naturally for agents.
- **AI task chaining** and feedback loop automation.
- **Integrating AI** insights into daily business processes.

Project: **AI Workflow Co-Pilot**: Create an automation system that reads data, triggers tasks, and delivers daily AI summaries or reports.

Outcome: **Build adaptive agents that plan, reason, and automate end-to-end workflows with minimal human input.**

Program Syllabus

Term 4 – Week 8-9

No-Code App Development & AI Deployment

Bubble | Streamlit | FastAPI | Cursor | Supabase | Framer | Postman | Replit | Dust AI

You'll Learn:

- **Low-code** and **no-code** app creation with AI integration.
- **Connecting APIs**, embeddings, and vector stores to create user-ready products.
- Designing **front-end interfaces** for **chatbots** and **copilots**.
- Testing endpoints, **debugging**, and managing data securely.
- **Collecting user feedback** and improving model performance.

Project: **AI Assistant Web App**: Build and deploy an interactive web-based chatbot or business assistant connected to your AI workflows.

Outcome: **Deploy a functional, web-accessible AI solution usable by teams or clients.**

Program Syllabus

Term 5 – Week 10-11

AIOps, Optimization & Observability

Azure | Vertex AI | Amazon SageMaker | Hugging Face | Power BI | Rows | ClickUp Brain | Slack | Notion

You'll Learn:

- **AIOps essentials:** monitoring, observability, and self-healing pipelines.
- **Defining KPIs for AI** performance (accuracy, latency, cost, drift).
- Automating alerts, testing, and continuous improvement.
- Visualizing AI usage and cost with **BI dashboards.**
- **AI governance** and compliance considerations in production.

Project: **AIOps Dashboard**: Create a performance monitoring dashboard that tracks AI output quality, latency, and cost metrics.

Outcome: **Understand how to monitor, optimize, and maintain AI solutions in real-world environments.**

Program Syllabus

Term 6 – Week 12-14

Startup Collaboration Capstone: AI CoLab Experience

Combination of previously learned tools based on project type.

You'll Learn:

- Build your own AI product with **startup companies**.
- Product thinking and end-user problem solving.
- **Cross-functional teamwork:** business + tech + creative roles.
- Documenting, presenting, and pitching your AI solution.

Project: **Bring everything you've learned together by building a complete AI-powered solution**, whether it's an automation workflow, a co-pilot, a domain-specific AI assistant, or a full no-code web app.

Outcome: **By the end of this capstone, you will graduate with a startup-ready AI product**, plus a verified Startup Experience Certificate through the AI CoLab partnership.
